PROJECTS			
Centurion University	Project Title: <ul style="list-style-type: none">Library Management System (5th sem)Telephone Directory using Shell Scripting (4th sem)Weather Portal in Srping Technology (8th sem) Start date – End Date		
	Area of the project <ul style="list-style-type: none">Library Management System: This project was undertaken during my 5th semester in which myself and my group-mates made a web project among students of Centurion. Here we were able to issue books, return books and also send mail to the students if they are not returning their books in college library. This project we have done using java servlet, jsp, html, css and for storing and retrieving data MYSQL is used.Telephone Directory using Shell Scripting: This project was undertaken by me and my group-mates where we designed a telephone directory, where user can add new contacts, edit contacts, view contacts and delete the contact. The Telephone Directory was developed using BASH in SHELL SCRIPTING, File Based System. In this system no of customer’s telephone detail’s, and his/her Name, Address, Phone number are stored and maintained.		

- **Weather Portal in Spring Technology:**

The motivation for implementing this “**Weather Portal**” project is to make the people aware that how much we are humiliating our natural environment daily. So, this project will generate the reports of the weather on the daily basics of a particular location.

Moreover, we value recent learning about the Java and JavaScript programming languages as well as seeing how powerful and dynamic they are when it comes to web designing and applications. The languages used to build this application are for Frontend **HTML, CSS, BOOTSTRAP** and **ANGULARJS** and for Backend is **MYSQL** and control part is **Spring framework** using java because I found them to be extremely useful for implementing this project.

INTERNSHIP PROJECT

Appstone
pvt.ltd.

Area of the project:

- **Campus Recruitment System:**

Campus Recruitment System is a web application software which helps to make a clear

Communication between Student’s, Companies and Placement Cell.

First Admin of the website register placement cell faculties by email and password in website so they can login and manage their work. Placement Cell will add those students who are interested for their placement. No extra student’s allowed who has not added by placement cell. The students have to visit placement cell for adding the name in placement cell.

Iserveu
technolog
y Pvt Ltd

In this internship I had working on node js API along with firebase database with live project Of the organisation .Like – easy policy website,ISU payment app biller API,etc.

Freelance
projects

Multi level marketing

A Multi level marketing project using core php , html, css ,bootstrap, javascript, MySQL.Here I am doing both admin and user pannel data fetching from database and some tree structure also Implemented here .
